

CRUCC2.4 software, as its name says, will help you out to calculate the audio security code of various car brands. With the help of this elegant calculator you will easily generate the anti-theft code for car radios. You will be able to generate 4 band, 5 band and 6 band of receiver serial numbers for car radios. You can now view the information in English, German, Spanish, French, Italian and Arabic languages. Features Some of the feature: Usability Even though some aspects of the software may look a little sketchy, it is easy to use. Additional Features -Ability to search between different types of car radios. -Search between different types of car radios. -Access to the corresponding database (database is supported in different languages). -Provides an option for 2 languages for displaying the information -Arabic and English. Field of the Invention The present invention relates to a communication network which includes a plurality of relay nodes. 2. Description of the Prior Art It is said that a network which includes a plurality of relay nodes is called a multi-hop wireless communication network. In the multi-hop wireless communication network, relay nodes in between of source-destination pairs are called relay nodes for information transfer. In recent years, it is studied that the multi-hop wireless communication network is applied to mobile communication in order to increase communication capacity and to extend communication distance. Herein, in order to realize the multi-hop communication, propagation loss of radio signals from the relay nodes to the destination nodes is usually considered. Generally, it is considered that the propagation loss is approximately proportional to the distances in the multi-hop communication network. Thus, it is considered that the communication distance and the communication capacity are proportional to the number of the relay nodes. However, the above-described relation is not always satisfied. That is, in some cases, the communication distance and the communication capacity are inversely proportional to the number of the relay nodes. Thus, the number of the relay nodes in the multi-hop wireless communication network, which satisfies the relation of the communication distance and the communication capacity, is limited. The limitation of the number of the relay nodes is due

Jun 1, 2018 the version is new without any interest by all without any issues . www.crucc.com . crucc.com | car radio universal code calculator free download Jul 7, 2018 V1.3.4.1 - Car radio universal code calculator 1.3.
