Narrow in full in high quality & download MP3.Q: How to add datetime from one year to another in datagridview I have a datagridview (dgv) which is filled with values from database using dataprovider. On my page load event i have the following code to add one year from current year and it will then show that year in the dgv.

```
private void dgv_Load(object sender, EventArgs e) {  
    dgv_Cars.DataSource = null;  
    dgv_Cars.DataSource =  
    Car.ReturnResults(2012);  
    dgv_Cars.DataMember = "db_Cars"; }  
I have also this code to retrieve current date:  
private DateTime GetDate() {
```

---

DateTime now = DateTime.Now;  
return now.Date; } The problem is that  
i want to add one year and show that  
year as well so when i click a year on  
the right side of the dgv it should load  
the values which is in that year. I have  
tried the following but this will not  
work since the value in the database is  
the number of the year. private void  
dgv\_MonthChanged(object sender,  
EventArgs e) { if  
(dgv\_Cars.SelectedRows.Count > 0) {  
int iYear = Convert.ToInt32(
