AutoCAD is usually billed as a CAD or "computer aided design" software, which is used for drafting, planning, and detailing of any kind of projects, from small additions to large buildings. It is designed to allow computer assisted design and drawing, drafting and visualization of 2D and 3D drawings. Contents show]

History Edit AutoCAD was first introduced in December 1982 as a computer aided design and drafting software for desktop and standalone (without a computer) microcomputer systems, including the Apple II, IIcx, IIci, IIcie, IIcii, and IIIx line. Its first version was as AutoCAD 3.2. It was the first software program to feature a viewing window in the computer screen,

---

the ability to save project files to floppy disk, as well as the ability to create and save the X, Y, and Z coordinate system maps, each of which could be used for any drawing. It is also notable for its inclusion of the graphics capability in the software, which enabled the creation of two-dimensional and three-dimensional (3D) diagrams for computer aided drafting. It was also the first

---

professional CAD application to come bundled with a "vector" drawing engine, which also included a drawing of solids. In the early 1980s, computer-aided design and drafting (CAD) applications were introduced by companies including Macromedia (later Macromedia Flash) and Aldus (later Aldus Pagemaker). While Flash was the first to market a realistic drawing interface,

---

Autodesk's application was the first to incorporate the graphics capability to create 2D and 3D diagrams for computer aided drafting (CAD). AutoCAD is considered the standard CAD application, and Adobe InDesign was the first to develop the functionality for print on demand. The AutoCAD trademark was first licensed in 1982, to Autodesk Inc. by Bob Barbee &

---

Associates, Inc. (now Iconix Brand Group). This was the first trademark ever registered on the Internet. The AutoCAD trademark was re-licensed to Autodesk in 2010 for use in Canada. Features Edit AutoCAD is available on the desktop, as well as on the Web, as a free or a commercial application, and there are also stand-alone versions that are available on floppy disk or CD.

---

AutoCAD features include the ability to make 2D drawings, 3D drawings and computer animations. The following are

In 2010, Autodesk introduced an XML-based drawing protocol "XML Paper" for use in file exchange, and in 2013, Autodesk renamed it as the DGN standard. In AutoCAD Activation Code 2010 and later,

there is a WYSIWYG editor for HTML, which, unlike a proper HTML editor, was inspired by Microsoft Word. This allows the end-user to create an HTML file and export it as a PDF file, then start editing the HTML file from the PDF file. Unlike the WYSIWYG system in Illustrator, the HTML5 editor in AutoCAD Cracked 2022 Latest Version 2010 uses

different elements for text and images, and is not based on HTML. With respect to physics, AutoCAD is closely related to other programs in the Autodesk family, such as Maya. AutoCAD supports NURBS, finite element analysis, mechanics and other physics-based applications, such as turbomachinery. With regard to refurbishing, AutoCAD also supports mesh generation,

particles, full material capability, cloth, particles, and subdivision surfaces.

Collections AutoCAD includes many built-in collections that are grouped together to make their features easier to discover and use: 3D Warehouse – The 3D Warehouse features 3D objects and other 3D content that can be used in AutoCAD and in other AutoCAD-based applications. These objects

---

come from Autodesk's partner websites, the website of participating Autodesk resellers, local CAD vendors, and Autodesk's own repository of 3D content, the 3D Warehouse. Since AutoCAD 2007, the 3D Warehouse has been integrated into the left pane of the software's user interface (UI) and provides direct access to AutoCAD-compatible 3D content. The 3D

Warehouse is a dynamic collection that will be updated as the 3D content changes.

North Carolina's Campus Carry law is being challenged before the state Supreme Court, which heard oral arguments Wednesday. The two students who filed the lawsuit say they wish to carry their firearms on campus because they feel that, under state law, that's their right. However, the university they attend, North Carolina

---

State University, has an anti-gun policy that bars its students from carrying weapons. Legal documents say that the law gives the state's schools broad discretion in how to regulate student access to firearms.

According to court records, the law also gives schools the option of establishing a policy that requires students to surrender their firearms if they want to attend school.

RALEIGH, N.C. — In a development Tuesday that could end up before the U.S. Supreme Court, the state Supreme Court heard arguments on the constitutionality of a law that allows guns to be carried on college campuses. “We do not have a problem with someone carrying a weapon on campus,” the plaintiffs’ attorney told a panel of judges. “We have a

---

problem with someone deciding that our legislature does not have the authority to permit that.” North Carolina legislators passed a law in March that allows college and university students, teachers, and administrators to carry concealed firearms on campus. The law also gives the state’s schools broad discretion in how to regulate student access to firearms. According to court

---

records, the law also gives schools the option of establishing a policy that requires students to surrender their firearms if they want to attend school. Raleigh attorney David Raben of Raben & Raben, who is representing student and faculty plaintiffs in the case, said the law places an undue burden on students who choose to attend a school with a “no weapons” policy. “If a

---

school makes clear to a student that it is prohibiting weapons on campus, then the student who carries a concealed weapon, without being a threat, can potentially subject himself or herself to arrest,” Raben said. But opponents of the law, which is set to take effect July 1, say it infringes upon the Second Amendment rights of students. “The state and the schools are favoring the

students who wish to carry weapons,” said Raleigh attorney David Popowski, who is representing several colleges, including Waverly College and the University of North Carolina, in the case. A panel of three judges
