From the beginning, it was meant to compete with desktop publishing applications like Adobe PostScript and Adobe Draw, which enabled users to create, edit, and print documents. In order to stand out from the competition, Autodesk focused on creating a fast and efficient CAD tool. It is not like the other desktop-style CAD applications, in which each user has to design or edit documents in separate graphical windows. You can edit documents in a single window and use a single set of commands to perform multiple tasks. AutoCAD's main screen. Click to see full-size.
