The product of 3 years of development and 6 months of user testing and tweaking, the PCH-1 Chorus is truly a plugin with many features. It's worth mentioning, too, that PCH-1 Chorus is not only vintage sounding chorus, it's a whole range of vintage-sounding effects, most of which you have never heard before in your life, and also has a few effects that everyone has already heard and loved. Our chorus works pretty similar to the classic circuit - we use two metal valves in series, a comb filter and a resonator as a final stage. The plug-in includes a built-in chorus filter which has very slight imperfections and a built-in one octave down multi mode. We have designed the plugin to work in a way that lets you easily modify the frequency and level of the chorus, the width of the resonator and filter. PCH-1 Chorus Activator 2022 [New]

===== The PCH-1 Chorus is a powerful, vintage sounding chorus effect, which makes it perfect for any mixing situation. Just add it to your chain and let the sounds fly. In the default position the PCH-1 Chorus sounds slightly "hollow" and adds a bit of a cool color to the sound. If you want to go further you can experiment with its unique control layout to get just the right amount of movement to your mix. Settings: =====
===== Volume: The size of the effect. Like with every effect, the bigger the better. Width: The width of the effect. DC Rolloff: This controls the amount of upper rolloff. Depth: The amount of depth to the sound. EQ 1: Controls the first EQ band. EQ 2: Controls the second EQ band. As you can see the PCH-1 Chorus plugin is split into four different control points. The first one is the filter for the fattest sound. The PCH-1 Chorus comes with a variety of different kinds of filters to get a wide range of sounds. The cutoff of each band is fixed and the resonance and pre-filter settings can be set at your own will. The second section is the envelope. It's almost like a little envelope in itself. The rate and depth of the envelope are both controllable and it will also adjust itself to any incoming audio signal. For example: The cutoff of the second band may be somewhere around 300 Hz. But if you put in something below that, the PCH-1 Chorus will follow that frequency until it gets back to its own settings. The third section is the equalizer. The three EQ bands can be set to be linear, centered or band shaped, they can be set to have different widths and can be mixed freely. If you want to get extreme you can also change the frequency bands of the equalizer to filter bands. This is one of the most powerful features of the PCH-1 Chorus. You can create any kind of sound to your sound by mixing the bands to your hearts content. Finally there's the section which controls the "robot mode" of the plugin. It makes the PCH-1 Chorus shake back and forth and it can actually also be controlled by an incoming audio signal. The Chorus is designed to be fairly
